Unit 4 – Equilibrium

1. $K_{eq} = \frac{[\text{products}]^x}{[\text{reactants}]^y}$... x and y represent the coefficients in the balanced chemical equation.
2. Only (aq) and (g) appear in an equilibrium expression. Use [] for Molarity and (P_{gas}) for atm.
3. A large K_{eq} means that there are more products at equilibrium. A small K_{eq} means there are more reactants at equilibrium.
4. Reversing a reaction? $1/K_{eq}$
Doubling a reaction? $(K_{eq})^2$
Adding reactions? Multiply the K's together
5. Le Chatelier's Principle: It's all about determining Q!!
If $Q > K_{eq}$, then the reaction shifts to the left, towards the reactants.
6. Catalysts and inert gases DO NOT shift an equilibrium.
7. Changes in pressure (caused by changing the volume of a container) can shift an equilibrium ONLY IF the # of gas particles are different on each side...An increase in the pressure favors a shift in the equilibrium towards the side with LESS moles of gas. (Reminder: As $V \downarrow$, $P \uparrow$)

Thou Shalt Not Forget Questions

Unit 4 – Equilibrium

1. Write the equilibrium expression for the following reaction: $2\text{N}_{2(g)} + 3\text{H}_{2(g)} \rightarrow 2\text{NH}_{3(g)}$
2. Write the K_c for this reaction in #1. Write the K_p for this reaction in #1
3. Does a large K_{eq} means that there are more products or reactants at equilibrium?
Does a large K_{eq} means that there are more products or reactants at equilibrium?
4. What happens to K_{eq} when:
Reversing a reaction? _____
Doubling a reaction? _____
Adding reactions? _____
5. If Q is larger than K_{eq} , then the reaction shifts which direction?
If Q is smaller than K_{eq} , then the reaction shifts which direction?
6. a) Name 2 things that DO NOT shift a reaction's equilibrium position.
b) Name 3 ways to increase the amount of products present at equilibrium in the following endo/exo reactions:
ENDO: $2\text{H}_2\text{S}(g) + 3\text{O}_2(g) \rightarrow 2\text{H}_2\text{O}(g) + 2\text{SO}_2(g)$ **EXO:** $2\text{H}_2(g) + \text{O}_2(g) \rightarrow 2\text{H}_2\text{O}(g)$
7. a) When will a change in pressure (by changing the volume) NOT shift an equilibrium?
b) Which direction will the equilibrium shift if the volume is decreased? $2\text{H}_2(g) + \text{O}_2(g) \rightarrow 2\text{H}_2\text{O}(g)$
Which direction will the equilibrium shift if the volume is increased? $2\text{H}_2(g) + \text{O}_2(g) \rightarrow 2\text{H}_2\text{O}(g)$
