

Name: \_\_\_\_\_

Period: \_\_\_\_\_

Seat#: \_\_\_\_\_

**Directions:** Complete the following chart by choosing from the following options:

Equilibrium Shift: *left, right, no change*       $\Delta [ ]$  / Temp: *increase, decrease, no change*       $\Delta K_{eq}$ : *no, yes*

Stressor	Equilibrium Shift	$\Delta [\text{N}_2]$	$\Delta [\text{H}_2]$	$\Delta [\text{NH}_3]$	$\Delta \text{Temp}$	$\Delta K_{eq}$
1) Add N <sub>2</sub>	Right	<i>Slight</i> increase	Decrease	Increase	Increase	No
2) Add H <sub>2</sub>						
3) Add NH <sub>3</sub>						
4) Remove N <sub>2</sub>						
5) Remove H <sub>2</sub>						
6) Remove NH <sub>3</sub>						
7) Increase Temp						
8) Decrease Temp						
9) Increase Pressure						
10) Decrease Pressure						
11) Write the equilibrium constant expression for $K_{eq}$ $\text{POCl}_3(\text{g}) \leftrightarrow \text{POCl}(\text{g}) + \text{Cl}_2(\text{g})$				12) Write the equilibrium constant expression for $K_{eq}$ $2\text{H}_2(\text{g}) + \text{O}_2(\text{g}) \leftrightarrow 2\text{H}_2\text{O}(\text{g})$		
13) Write the equilibrium constant expression for $K_{eq}$ $2\text{C}_2\text{H}_4(\text{g}) + \text{O}_2(\text{g}) \leftrightarrow 2\text{CH}_3\text{CHO}(\text{g})$				14) Write the equilibrium constant expression for $K_{eq}$ $2\text{H}_2\text{S}(\text{g}) + 3\text{O}_2(\text{g}) \leftrightarrow 2\text{H}_2\text{O}(\text{g}) + 2\text{SO}_2(\text{g})$		

**Dougherty Valley HS Chemistry**  
**Equilibrium – Le Chatelier’s Principle and Keq Practice**

<p><b>15)</b> Write the equilibrium constant <math>K_c</math> for the equation  <math>2\text{SO}_2(g) + \text{O}_2(g) \leftrightarrow 2\text{SO}_3(g)</math></p>	<p><b>16)</b> Write the equilibrium constant <math>K_c</math> for the equation  <math>\text{CaCO}_3(s) \leftrightarrow \text{CaO}(s) + \text{O}_2(g)</math></p>
<p><b>17)</b> Write the equilibrium constant <math>K_p</math> for the equation  <math>2\text{SO}_2(g) + \text{O}_2(g) \leftrightarrow 2\text{SO}_3(g)</math></p>	<p><b>18)</b> Write the equilibrium constant <math>K_p</math> for the equation  <math>\text{H}_2\text{O}(g) + \text{C}(s) \leftrightarrow \text{H}_2(g) + \text{CO}(g)</math></p>
<p><b>19)</b> The equilibrium constant expression for a gas reaction in <math>K_{\text{eq}} = \frac{[\text{NH}_3]^4[\text{O}_2]^5}{[\text{NO}]^4[\text{H}_2\text{O}]^6}</math> Write the balanced chemical equation corresponding to this expression.</p>	
<p><b>20)</b> The equilibrium constant expression for a gas reaction in <math>K_{\text{eq}} = \frac{[\text{CS}_2][\text{H}_2]^4}{[\text{CH}_4][\text{H}_2\text{S}]^2}</math> Write the balanced chemical equation corresponding to this expression.</p>	
<p><b>21)</b> The equilibrium constant <math>K_{\text{eq}}</math> for the equation <math>2\text{HI}(g) \leftrightarrow \text{H}_2(g) + \text{I}_2(g)</math> at <math>425^\circ\text{C}</math> is 1.84. What is the value of <math>K_{\text{eq}}</math> for the following equation: <math>\text{H}_2(g) + \text{I}_2(g) \leftrightarrow 2\text{HI}(g)</math></p>	
<p><b>22)</b> Consider the decomposition of nitrous oxide, also known as laughing gas. <math>2\text{N}_2\text{O}(g) \leftrightarrow 2\text{N}_2(g) + \text{O}_2(g)</math>            At <math>25^\circ\text{C}</math> the <math>K_c</math> is <math>7.3 \times 10^{34}</math></p> <p>a. Based on the information given, what can you say about the rate of decomposition of the reaction?</p> <p>b. Based on the information given, does nitrous oxide have a tendency to decompose into nitrogen and oxygen, or does it have a tendency to stay as nitrous oxide? Justify your answer.</p> <p>c. You can convert back and forth between <math>K_c</math> and <math>K_p</math> if you are given one of the values using the following equation:  <math>K_p = K_c(RT)^{\Delta n}</math> where <math>R</math> is the ideal gas constant (<math>0.0821 \text{ L}\cdot\text{atm}/\text{K}\cdot\text{mol}</math>), <math>T</math> is temperature (in Kelvin), and <math>\Delta n</math> is the change in number of moles of gaseous products compared to gaseous reactants <math>\Delta n = \Sigma(\text{moles of gaseous products}) - \Sigma(\text{moles of gaseous reactants})</math> Using this information, and the information given at the start of the problem, calculate the value of <math>K_p</math></p>

**Equilibrium – Le Chatelier’s Principle and Keq Practice**

---

**23)** For the equilibrium system described by  $2\text{SO}_2(\text{g}) + \text{O}_2(\text{g}) \leftrightarrow 2\text{SO}_3(\text{g})$  at a particular temperature the equilibrium concentrations of  $\text{SO}_2$ ,  $\text{O}_2$  and  $\text{SO}_3$  were 0.75 M, 0.30 M, and 0.15 M, respectively. At the temperature of the equilibrium mixture, calculate the equilibrium constant  $K_{\text{eq}}$  for the reaction.

**24)** For the equilibrium system described by:  $\text{PCl}_5(\text{g}) \leftrightarrow \text{PCl}_3(\text{g}) + \text{Cl}_2(\text{g})$   $K_{\text{eq}}$  equals 35 at  $487^\circ\text{C}$ . If the concentrations of the  $\text{PCl}_5$  and  $\text{PCl}_3$  are 0.015 M and 0.78 M, respectively, what is the concentration of the  $\text{Cl}_2$ ?

**25)**  $\text{CO}_2(\text{g}) + \text{H}_2(\text{g}) \leftrightarrow \text{CO}(\text{g}) + \text{H}_2\text{O}(\text{g})$

Calculate the value of the equilibrium constant,  $K_c$ , for the above system, if 0.1908 moles of  $\text{CO}_2$ , 0.0908 moles of  $\text{H}_2$ , 0.0092 moles of  $\text{CO}$ , and 0.0092 moles of  $\text{H}_2\text{O}$  vapor were present in a 2.00 L reaction vessel at equilibrium. (Remember that  $M = \text{mol/L}$ )

**26)** The following table gives some values for reactant and product equilibrium concentrations (in mol/L) at 700 K for the Shift Reaction, an important method for the commercial production of hydrogen gas.  $\text{CO}(\text{g}) + \text{H}_2\text{O}(\text{g}) \leftrightarrow \text{CO}_2(\text{g}) + \text{H}_2(\text{g})$

Trial	$[\text{CO}_2]$	$[\text{H}_2]$	$[\text{CO}]$	$[\text{H}_2\text{O}]$
1	0.600	0.600	0.266	0.266
2	0.600	0.800	0.330	0.286
3	2.00	2.00	0.877	0.896
4	1.00	1.50	0.450	0.655
5	1.80	2.00	0.590	1.20

a. Write the expression for calculating  $K_{\text{eq}}$  for the reaction.

b. Calculate the  $K_{\text{eq}}$  for each of the five trials.

c. How do the  $K_{\text{eq}}$ s for each trial compare to each other? Why?
