Acid/Base Nomenclature and Self Ionization of Water

Target

I can name acids/bases and explain the self ionization of water and its connection to the pH scale.

Acid Nomenclature

Binary acid:

Hydrogen + highly electronegative element

Steps to Name:

- 1) Begins with **hydro**
- 2) Add the **root of the other element**
- 3) Add **-ic**
- 4) + **acid**

HBr

Hydrobromic acid

HCl

Hydrochloric acid

HI

Hydroiodic acid

Acid Nomenclature

Oxyacids:

Hydrogen + oxygen + a third element

Steps To Name:

- 1) Begins with **Root of ion**
(not H or O) (sometimes starts with **per-** or **hypo-**)
- 2) Add **-ic, or -ous**
- 3) + **acid**

Oxyacids Continued...

Names change a little depending on how many oxygens the anion comes with...

Anion ends with **-ate** → change ending to **-ic**

Anion ends with **-ite** → change ending to **-ous**

Anion has **extra O than -ate** → start with **Per-**

Anion has **fewer O than -ite** → start with **Hypo-**

Oxyacids Continued...

ClO^- less O version \rightarrow **Hypochlorous Acid**

ClO_2^- -ic version \rightarrow **Chlorous Acid**

ClO_3^- -ate version \rightarrow **Chloric Acid**

ClO_4^- more O version \rightarrow **Perchloric Acid**

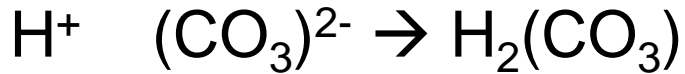

Some names are a little off to make them sound better, easier to say:

Phosphoric acid...not Phosphic acid

Sulfuric acid...not Sulfic acid

Remember...

When writing formulas make them neutral! That is how you know how many hydrogens it has!

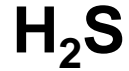

They get weird really fast...

Focus on the patterns, just get used to the weird ones...

Naming Acids

Hydrofluoric acid

Hydrosulfuric
acid

Nitric acid

Nitrous Acid

Sulfuric acid

Strong Acids and Bases

STRONG?

They dissociate completely

*HCl is a strong acid so
LOTS of ions in solution!*

Strong Acids and Bases are the easy ones...assuming the dissociate completely makes our math easier 😊

MEMORIZE!

The Seven Strong Acids

- 1) HCl – Hydrochloric Acid
- 2) HBr – Hydrobromic Acid
- 3) HI – Hydriodic Acid

Binary Acids

- 4) H₂SO₄ – Sulfuric Acid
- 5) HNO₃ – Nitric Acid
- 6) HClO₄ – Perchloric Acid
- 7) HClO₃ – Chloric Acid

Oxyacids

MEMORIZE!

The Eight Strong Bases

They are all hydroxides!

- 1) LiOH – Lithium Hydroxide
- 2) NaOH – Sodium Hydroxide
- 3) KOH – Potassium Hydroxide
- 4) RbOH – Rubidium Hydroxide
- 5) CsOH – Cesium Hydroxide

Alkali Metals

- 6) Ca(OH)₂ – Calcium Hydroxide
- 7) Sr(OH)₂ – Strontium Hydroxide
- 8) Ba(OH)₂ – Barium Hydroxide

Alkaline
Metals

Neutralization Reactions

**What happens when you mix
a strong acid and strong base?**

**It is
always
the
same!**

Acid + Base \rightarrow Water + Ionic Salt

Why is the pH of H₂O equal to 7?

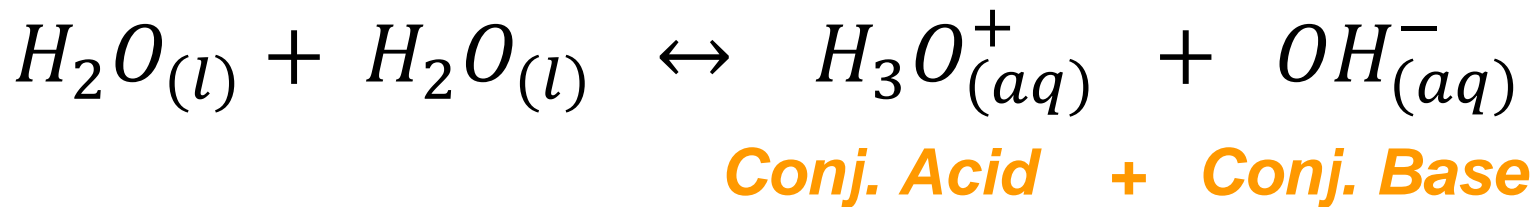

Because water dissociates!

It “self ionizes” – not much...but it does!

Back to Equilibrium Chapter!

pH is a measure of ion concentration...

Dissociation is a reversible reaction...

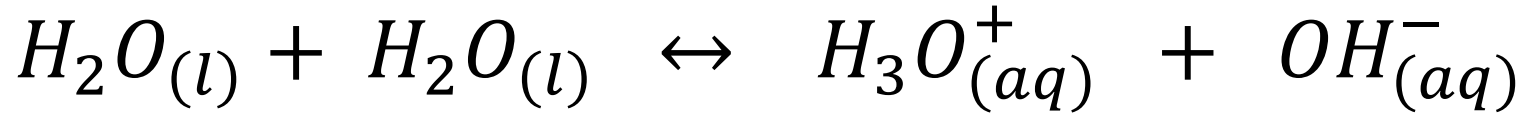

So how do we find the [] of ions at equilibrium????

Equilibrium expressions!

Self Ionization of Water

What is the equilibrium expression for water?

$$K_w = [H_3O^+][OH^-]$$

Remember!

Pure liquids aren't included in equilibrium expressions!

Self Ionization of Water

$[\text{H}_3\text{O}^+]$ and $[\text{OH}^-]$ are both equal to $1.0 \times 10^{-7} \text{M}$ at 25°C .

**NOTICE
ANYTHING???**

$$K_w = [\text{H}_3\text{O}^+] [\text{OH}^-]$$

$$1.0 \times 10^{-14} = [1.0 \times 10^{-7}] \times [1.0 \times 10^{-7}]$$

Self Ionization of Water

$$K_w = [\text{H}_3\text{O}^+] [\text{OH}^-]$$

$$1.0 \times 10^{-14} = [1.0 \times 10^{-7}] \times [1.0 \times 10^{-7}]$$

The concentration of $[\text{H}_3\text{O}^+]$ and $[\text{OH}^-]$ are equal...
So it is neutral!

Also - The pH and the pOH of any aqueous solution are related through the K_w . That's why if you know one you can find the other! And why they add to 14...look at the exponents!

K_w Calculations

What is the $[H^+]$ in an aqueous solution with a hydroxide ion concentration of 0.001 M at 25 °C?

(BTW...THIS ONLY WORKS FOR AQUEOUS AT 25 °C)

$$K_w = [H^+] [OH^-]$$

$$1.0 \times 10^{-14} = [1.0 \times 10^{-3}] [H^+]$$

$$[H^+] = 1 \times 10^{-11} \text{ M}$$

Video on Dissociation of Water

<https://youtu.be/Xeuyc55LqiY>

Fun way to remember MOST of the strong/weak Acids/Bases

Careful...it doesn't have ALL of them!

<https://youtu.be/onGDi1KKjdM>

Missing:

RbOH and CsOH

They are not as common so some people leave them off...

A good recap video – Crash Course

<https://youtu.be/LS67vS10O5Y>

A video about “buffers” and
Acid Rain if interested...
